Example – Online Banking System

Use case description

Use Case	Fund Transfer
Primary Actor	Customer
Pre-condition	Customer logged in
Post-condition	Origin a/c credited, destination a/c debited, ref. number generated
Main Flow	1. Customer selects “Transfer Funds” from the account menu. [OBS-06] 2. System displays the customer's eligible accounts. [OBS-06] 3. Customer selects a source account, destination account, and amount. [OBS-07] 4. System validates the amount and the destination account. [OBS-07] 5. System displays a confirmation screen. [OBS-10] 6. Customer confirms the transfer. [OBS-11] 7. System debits, credits, and generates a reference number. [OBS-11] 8. System displays a transfer receipt and records the transaction. [OBS-13]
Alternate Flows	Insufficient Fund [OBS-08] • At Step 4, system validates the amount but fund is insufficient • Display insufficient fund message • Return to Step 3 Invalid Destination Account [OBS-09] • At Step 4, system validates destination account but account is invalid • Display invalid destination account message • Return to Step 3 Customer Cancels [OBS-14] • At Step 6, customer cancel fund transfer • Discard fund transfer • Return to Transaction Summary
Exception Flows	System/network fault while posting [OBS-12] • At Step 7, system/network fault while posting transaction • Roll back the transaction • Save transaction reference for support purpose • Display fund transfer fail message • Return to Transaction Summary

Here is a set of requirements for the Online Banking System, in the same form a business analyst would actually bring back from a customer interview

ID	Pattern	Requirement
OBS-01	Ubiquitous	The Online Banking System shall require a customer to authenticate with a customer ID and password before accessing any account function.
OBS-02	Event-driven	WHEN a customer submits valid login credentials, the Online Banking System shall display the Account Summary page.
OBS-03	Unwanted behaviour	IF a customer submits invalid login credentials, THEN the Online Banking System shall display an error message and shall not grant access to account functions.
OBS-04	Unwanted behaviour	IF a customer submits invalid login credentials three times in succession, THEN the Online Banking System shall lock the account and shall direct the customer to contact the bank.
OBS-05	Event-driven	WHEN an authenticated customer selects “View Account Balance,” the Online Banking System shall display the current balance of the selected account.
OBS-06	Event-driven	WHEN an authenticated customer selects “Transfer Funds,” the Online Banking System shall display the customer's eligible accounts.
OBS-07	Event-driven	WHEN a customer enters a source account, destination account and amount, the Online Banking System shall validate the amount against the source account's available balance and shall validate that the destination account is a valid, linked account.
OBS-08	Unwanted behaviour	IF the entered amount exceeds the source account's available balance, THEN the Online Banking System shall display an insufficient-funds message and shall not proceed with the transfer.
OBS-09	Unwanted behaviour	IF the destination account is invalid or not linked to the customer, THEN the Online Banking System shall display an invalid-account message and shall not proceed with the transfer.
OBS-10	Event-driven	WHEN the entered transfer details pass validation, the Online Banking System shall display a confirmation screen summarising the source account, destination account and amount.
OBS-11	Event-driven	WHEN a customer confirms a validated transfer, the Online Banking System shall debit the source account, credit the destination account, and generate a transaction reference number.

ID	Pattern	Requirement
OBS-12	Unwanted behaviour	IF a system or network fault occurs while posting a confirmed transfer, THEN the Online Banking System shall roll back any partial debit or credit and shall display a transfer-failed message, retaining the transaction reference for support.
OBS-13	Event-driven	WHEN a transfer is posted successfully, the Online Banking System shall display a transfer receipt and shall record the transaction in the history of both accounts.
OBS-14	State-driven	WHILE the transfer confirmation screen is displayed, the Online Banking System shall allow the customer to cancel instead of confirming.
OBS-15	Event-driven	WHEN an authenticated customer submits a payee, account and amount under “Pay Bills,” the Online Banking System shall validate and schedule the payment.
OBS-16	Event-driven	WHEN a customer selects “Logout,” the Online Banking System shall terminate the authenticated session.
OBS-17	Complex	WHILE a customer session is authenticated, IF no activity is detected for 10 minutes, THEN the Online Banking System shall automatically log the customer out.
